

ELYSIUM

University the way it should feel.

Hub02 x BGU Hackathon 2026 — Project Plan & Roadmap

Builder: Ammar Mawassi | ammar31mawassi@gmail.com

Hackathon Dates: June 17–22, 2026

Stack: Base44 (no-code/AI-native platform)

1. ONE-SENTENCE DESCRIPTION

ELYSIUM is a multilingual student companion that guides every Israeli university student through the hidden maze of campus life — from scholarships and rights to study groups and mentors — in Hebrew, Arabic, and English.

2. THE PROBLEM

University in Israel is harder than it should be — not because the academics are too hard, but because the system is a maze.

Students struggle with:

- Fragmented information — spread across portals, PDFs, WhatsApp groups, and emails nobody answers
- Financial pressure — NUIS 2025 survey: avg student monthly deficit of ₪588; 34% considered dropping out
- Language barriers — Arab students crossing from Arabic schooling into Hebrew-dominant academia; international students navigating Hebrew bureaucracy
- Hidden curriculum — appeals, rights, scholarships, Moodle, deadlines that nobody explicitly explains
- Belonging gaps — no easy way to find study partners, mentors, or communities in your degree

ELYSIUM solves all of this in one place, in three languages.

3. TARGET AUDIENCE

Primary: All students at Israeli universities

- BGU, Tel Aviv University, Hebrew University, Technion, University of Haifa, Bar-Ilan, Ben Gurion

Priority segments:

- First-year and preparatory-year students (highest confusion, highest need)
- Arab students transitioning from Arabic-language schooling
- New immigrants and international students
- Working students and long-distance commuters
- Students navigating financial pressure, rights, or returning after reserve duty

Three user roles:

- Student — main user, personalized experience
- Mentor — older student offering help in their field/language
- Admin — manages content, approves mentors, keeps guides accurate

4. CORE FEATURES

A. Smart Onboarding (5 steps, ~2 minutes)

- University selection (BGU, TAU, Hebrew U, Technion, Haifa, etc.)
 - Faculty / study field
 - Academic year (Prep / 1st / 2nd / 3rd / 4th+)
 - Preferred language (Hebrew / Arabic / English)
 - Help needs (checkboxes: scholarships, housing, exams, social, rights, bureaucracy, study partners)
- Output: personalized dashboard + starter guides + mentor suggestions

B. Guide Library (heart of the app)

Categories:

- First week on campus
- Course registration
- Exams, appeals & grades
- Student rights & benefits
- Email & communication templates
- Mental health & time management
- Study skills

Each guide format:

- Situation: what's the problem?
- What it means: plain language explanation
- What to do: step-by-step action
- Who to contact: specific office/person
- Useful links: verified sources

C. Mentor Network

- Browse mentors filtered by university + field + language + topic

- Mentor profile: bio, year, languages, help topics, contact method
- Admin approval flow to ensure quality

D. Study Groups

- Create/join groups locked to faculty/degree (your suggestion — correct)
- Exception: "General Skills" groups open university-wide (exam strategy, writing, English academic reading)
- Study Sessions inside groups: time, location, notes, spots

E. Planner

- Personal deadlines
- Scholarship deadlines (curated, updated per semester)
- Exam period dates per university
- "This week" view on dashboard

F. Personalized Dashboard

- "What matters now?" — deadlines this week
- "Start here" — 2-3 guides based on onboarding answers
- "Find someone" — mentor CTA
- "Your uni" — shortcut to university-specific page
- Saved guides

G. Language Switcher

- Hebrew ↔ English (MVP)
- Arabic (post-MVP, full RTL support)
- Official terms preserved in source language with explanation in user's language

5. DATABASE ENTITIES (Base44 Schema)

University

→ name, city, logo_url, website, supported_languages[]

Faculty

→ name, university_id

StudentProfile

→ user_id, university_id, faculty_id, year, preferred_language, help_needs[], living_context

Guide

→ title, category, situation, content_he, content_en, content_ar, university_id (null = universal), source_url, last_reviewed_date, is_published

Mentor

→ user_id, university_id, faculty_id, year, languages[], topics[], bio, contact_method, is_approved, is_active

StudyGroup

→ name, university_id, faculty_id, course_name, description, max_members, preferred_language, is_general_skills, is_active

StudyGroupMember

→ group_id, user_id, joined_date, role (member/leader)

StudySession

→ group_id, location, date_time, notes, max_spots, created_by

Deadline

→ user_id, title, date, category (exam / scholarship / admin / personal), source, university_id

SavedGuide

→ user_id, guide_id, saved_date

Feedback

→ user_id, guide_id (optional), type (guide/app/general), message, rating, created_date

6. 6-DAY HACKATHON ROADMAP

DAY 1 — Tuesday June 17: FOUNDATION

Goal: The app exists and onboards you.

- ☐ Create Base44 app — name: ELYSIUM
- ☐ Build all entity schemas
- ☐ Build onboarding flow (5 steps)
- ☐ Build dashboard shell
- ☐ Seed universities: BGU, TAU, Hebrew U, Technion, Haifa
- ☐ Add first 5 real guides

DAY 2 — Wednesday June 18: GUIDES

Goal: The app is actually useful.

- ☐ Build Guide Library page (browseable + searchable)
- ☐ Build single Guide view (situation → action → contact)
- ☐ Add Save guide functionality
- ☐ Seed 10 more guides (total: 15)
- ☐ University filter on guides
- ☐ Saved Guides in Profile

DAY 3 — Thursday June 19: PEOPLE

Goal: The app connects you to humans.

- ☐ Build Mentor profile creation + browse page
- ☐ Build Study Groups: create + join (degree-locked)
- ☐ Add General Skills groups (uni-wide)

- Build Study Sessions inside groups
- Basic join notification

DAY 4 — Friday June 20: PLANNER + POLISH

Goal: The app becomes a daily habit.

- Build Planner page
- Seed scholarship + exam deadlines
- Dashboard "This week" pulls from Planner
- Language switcher (Hebrew ↔ English)
- Mobile responsive check

DAY 5 — Saturday June 21: LAUNCH PREP

Goal: Ready to share with strangers.

- Final UI polish
- Write hub02.com listing description
- Take screenshots
- Draft WhatsApp share messages (Hebrew + Arabic)
- Get 5 friends to test — fix top 3 issues
- Add in-app feedback button

DAY 6 — Sunday June 22: LAUNCH DAY 🚀

Goal: WIN.

- Post in every BGU student WhatsApp/Facebook/Telegram group
- Ask teammates to reshare
- Monitor signups live
- Fix critical bugs immediately
- Attend closing event — pitch confidently

7. PRIZES WE ARE TARGETING

🏆 Overall 1st Place — ₪10,000

Strategy: most users (multilingual reach) + best student life fit (covers 10+ hub challenges)

🏆 Base44 Special Prize — ₪3,000

Strategy: most technically complete Base44 app; native entities, AI flows, clean UX

🌐 Tech7 Prize — International startup mentoring

Strategy: standout builder with clear product vision and scale potential

8. PITCH LINE

"ELYSIUM is the student companion that every Israeli university student needed but nobody built — multilingual, personalized, and built by a BGU student who felt this pain himself. University the way it should feel."

9. BUILDER BACKGROUND

Ammar Mawassi

- 3rd-year CS student, Ben Gurion University
- Arab student from Baqa El Gharbiya — personally lived this problem
- 2nd place winner, Hasoub Hackademia 2025 (Dalili — the predecessor to ELYSIUM)
- Builder: AI Job Tracker (Next.js + FastAPI + OpenAI), distributed systems, full-stack apps
- Using Base44 as primary build platform for this hackathon

10. SECOND TOOL (PARALLEL)

CV & LinkedIn Builder for CS Students

- AI tool: input GitHub + course list + prompts → output tailored CV, LinkedIn About, project bullets
- Target: BGU CS/engineering students applying for internships
- High virality: every student applying for jobs will share it
- Also built on Base44 → eligible for Base44 prize
